Top Content Opportunities

Publish a dedicated 8–12 minute tutorial titled 'N8N + MCP: The Complete Setup Guide (God Mode Explained)' building on Sefy Tofan's MCP angle

MCP is the single highest-engagement topic with no competing deep-dive content in the dataset; Sefy Tofan's video already proved demand at 3.35% engagement and 25,783 views, making a more thorough treatment likely to outperform it.

Create a full-length Claude Code project build titled 'I Built a Real Estate Lead Bot with Claude Code in 2 Hours (Full Walkthrough)'

Claude Code appears in 8+ recent titles across Damola and Kyan Salera with strong click signals, real estate automation is an emerging sub-topic (Damola's chatbot short gaining traction), and no dataset video combines both into a complete long-form tutorial.

Produce a 5–7 minute video titled 'I Replaced a \$500/Month Tool With n8n in 30 Minutes (No Code)' targeting a specific SaaS category

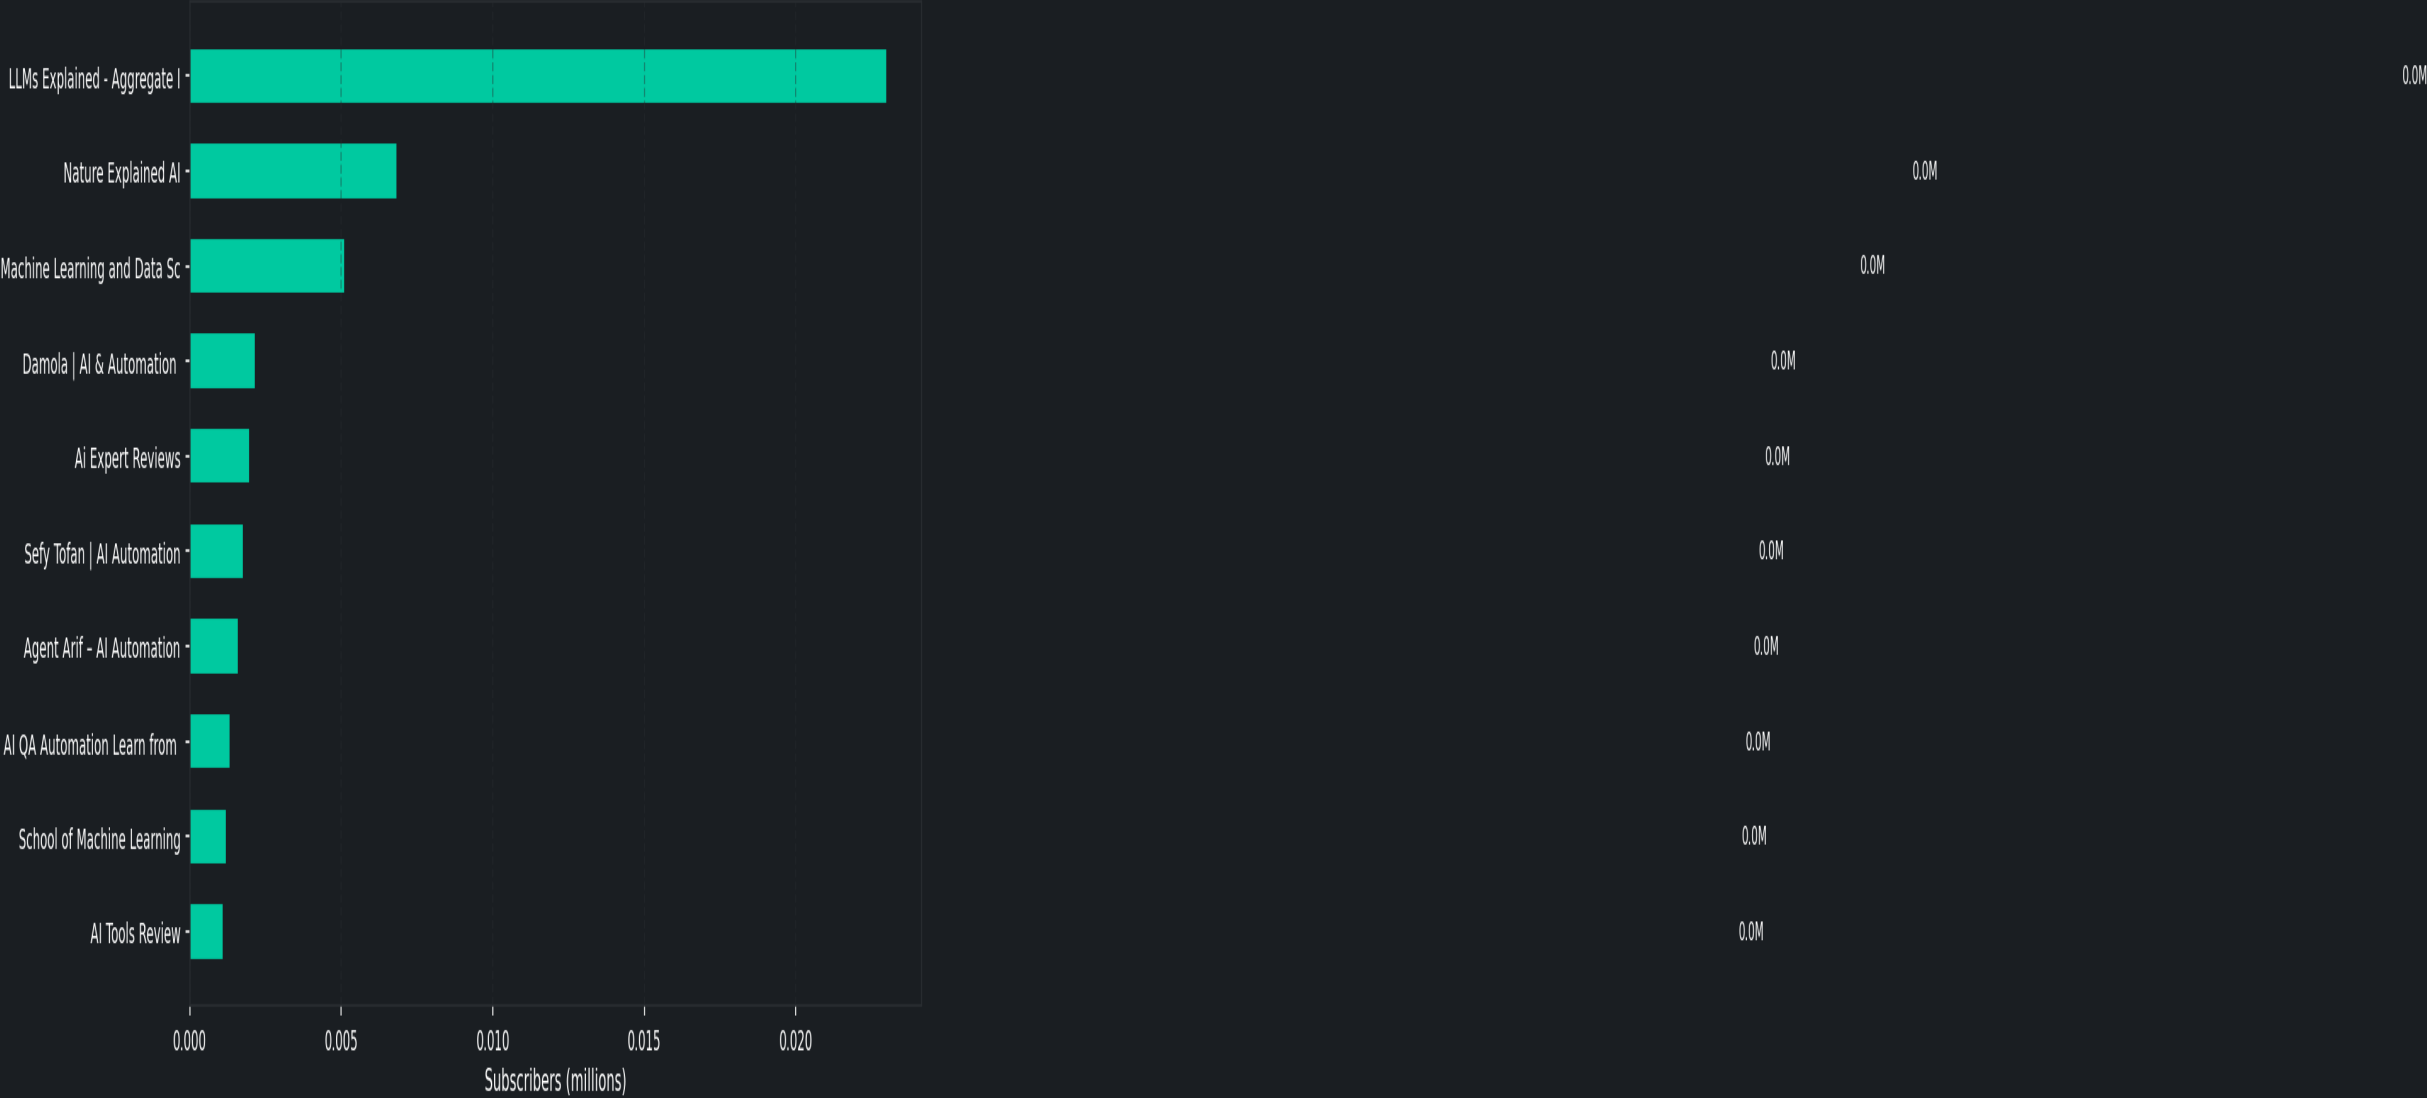

The 'I Replaced a \$500/Month ATS With This n8n Recruitment Automation System' title from Damola directly mirrors the highest-performing title patterns in the dataset (cost savings + specificity + no-code), and the n8n tag is the strongest AI automation keyword at 11 count with proven engagement.

Content Gaps & Opportunities

Under-served topics with high audience demand

MCP (Model Context Protocol) deep-dive tutorials beyond surface-level mentions

AI automation for specific business verticals (real estate, recruitment, homecare) with full workflow walkthroughs

Claude Code end-to-end project builds (not just demos)

AI tool cost comparisons and ROI breakdowns

Voice AI agents (Vapi) tutorials and walkthroughs

Damola mentions Vapi + Claude Code in a recent title but no dedicated Vapi tutorial exists in the dataset despite voice agents being a fast-growing sub-niche visible in recent AI news coverage.

Data-driven actions to grow your AI channel

- 1

Publish a dedicated 8–12 minute tutorial titled 'N8N + MCP: The Complete Setup Guide (God Mode Explained)' building on Sefy Tofan's MCP angle

MCP is the single highest-engagement topic with no competing deep-dive content in the dataset; Sefy Tofan's video already proved demand at 3.35% engagement and 25,783 views, making a more thorough treatment likely to outperform it.
- 2

Create a full-length Claude Code project build titled 'I Built a Real Estate Lead Bot with Claude Code in 2 Hours (Full Walkthrough)'

Claude Code appears in 8+ recent titles across Damola and Kyan Salera with strong click signals, real estate automation is an emerging sub-topic (Damola's chatbot short gaining traction), and no dataset video combines both into a complete long-form tutorial.
- 3

Produce a 5–7 minute video titled 'I Replaced a \$500/Month Tool With n8n in 30 Minutes (No Code)' targeting a specific SaaS category

The 'I Replaced a \$500/Month ATS With This n8n Recruitment Automation System' title from Damola directly mirrors the highest-performing title patterns in the dataset (cost savings + specificity + no-code), and the n8n tag is the strongest AI automation keyword at 11 count with proven engagement.
- 4

Build a beginner-friendly video titled 'Run Any AI Model Locally for Free in 2026 (Llama 4, DeepSeek R1 — One Guide)' consolidating School of Machine Learning's fragmented series

School of Machine Learning's local model tutorials are the top-performing non-automation AI content in the dataset (44,048 views, 19,457 views, 15,250 views) but are split across multiple videos; a consolidated 2026 guide would capture search demand for all model names in a single high-authority video.
- 5

Launch a short-form series titled 'AI Killed [Industry] — Here's the Proof' using the disruption title pattern with 60–90 second vertical videos

The 'Claude just killed' and 'GitHub Agent Mode Just Killed' title format appears 4+ times in the most recent 100 uploads from multiple channels, signaling high click-through potential, and the format is optimized for Shorts-driven subscriber acquisition at minimal production cost.
